SOMKENE ANOCHIE

SOFTWARE ENGINEER | Python, Django, React, Cloud and AI Integration

Zionsville, IN | (317) 381-1839 | somkeanochie@gmail.com | linkedin.com/in/somkene-anochie | github.com/SomkeneA

U.S. Permanent Resident | No sponsorship required

PROFESSIONAL SUMMARY

Software engineer building production full-stack and cloud-native applications with Python, Django, React, TypeScript, and PostgreSQL. Combines API and application development with AWS delivery, automated testing, observability, production troubleshooting, and human-reviewed AI workflows.

TECHNICAL SKILLS

Languages and Frameworks: Python, JavaScript, TypeScript, SQL, Django, Django REST Framework, React, Vite

Data and AI: PostgreSQL, Redis, REST APIs, OpenAI API, LLM workflows, prompt design, human-in-the-loop review, Dialogflow ES

Cloud and Delivery: AWS EC2, S3, CloudFront, Route 53, ACM, EFS, CloudWatch; GCP Cloud Run; Docker, Nginx, Jenkins, GitHub Actions

Engineering: Git, automated testing, Linux, CI/CD, Kubernetes, Terraform, Ansible, Prometheus, Grafana

PROFESSIONAL EXPERIENCE

Software Engineer | Independent Knowledge and Media Platform | Mar 2025 - Present

- Architected a production Django REST Framework and React/TypeScript platform combining knowledge, news, photography, search, authentication, and editorial publishing across approximately 5,000 entries.
- Designed REST endpoints, serializers, PostgreSQL models, discovery filters, rotating JWT authentication, role-based permissions, and transactional editorial approval workflows.
- Integrated the OpenAI API for AI-assisted content proposals and internal-link recommendations, with mandatory human review before publication.
- Refactored media delivery around centralized derivative resolution and bulk lookup; expanded tests across media selection, permissions, pagination, filters, and heading normalization.
- Built responsive React experiences for discovery, editing, moderation, news, galleries, dark mode, skeleton states, and accessible mobile viewing.
- Implemented Redis caching and timezone-aware daily content selection, and standardized API response handling across web and mobile clients.
- Deployed Dockerized Django/Gunicorn services on EC2 with PostgreSQL, Redis, EFS, S3/CloudFront, Nginx, Jenkins, and GitHub Actions; maintained isolated staging/production releases with health checks and rollback.
- Supported news publishing, tagging, and media workflows spanning 441 news articles, 9 news categories, 186 tags, and 79 photos.

DevOps Engineer | D&L Services - Contract | Jul 2022 - May 2025

- Implemented automated CI/CD and Kubernetes blue/green and canary deployment strategies, reducing release downtime to zero; managed autoscaling, health probes, resource controls, and repeatable release configuration.
- Supported CI/CD pipelines with Jenkins and GitHub Actions, including health checks and rollback.
- Used Prometheus, Grafana, and CloudWatch to monitor application health and troubleshoot deployment issues.

DevOps Engineer | Dominican Designs - Full-time | Dec 2017 - 2022

- Automated infrastructure with Terraform and Ansible, standardized Docker/Kubernetes deployments, and implemented Prometheus, Grafana, and CloudWatch monitoring.
- Used Ansible to manage repeatable Linux configuration and support consistent deployment environments.
- Configured Kubernetes readiness/liveness probes and resource requests and limits to support application availability.

SELECTED PROJECT

AI-Integrated Weather Chatbot | WGU

- Built a Dialogflow ES weather assistant with a Node.js webhook on Google Cloud Run, integrating Weather.gov and Open-Meteo APIs; tested intents, parameters, API responses, logs, monitoring, and rollback considerations.

EDUCATION

M.S. Software Engineering - AI Engineering | Western Governors University | 2026

B.S. Computer Science | University of Nigeria | 2014
